## Intellidyne helping Levittown go green

**Glen Cove, NY** — Intellidyne, LLC, is helping Levittown, known as the nation's first suburb, go green in celebration of its 60th birthday. Intellidyne, working with Nassau County executive Thomas R. Suozzi and the local energy company, is contributing to a greener Levittown by offering its microprocessor-based *IntelliCon®-HW+* Hot Water Heating System Fuel Economizer to 50 Levittown households at no cost. The control has an outstanding record of energy saving, with reductions of 10% or more in energy use after installation.

The Intellidyne *IntelliCon-HW+* is a microprocessor-controlled, hot water (hydronic) heating systems fuel economizer. *IntelliCon-HW+* reduces energy consumption by adjusting the burner run pattern to match the system's "heat load." *IntelliCon-HW+* determines the "heat load" by dynamically monitoring the boiler out-flow water temperature and the rate at which this temperature is changing.

Levittown, born in the rush of World War II veterans returning home to start families, is determined to be a model for the nation with its Green Levittown initiative. And to make it easier for today's Levittown families, it is working with eight companies who specialize in green products, from energy-saving devices and home-improvements to financing.

This is important in a town where many of the boilers are the ones originally installed when the homes were built in 1947. The new computer-based controls will provide energy savings while ensuring the continued comfort of Levittown residents. The households chosen need only to call to set up an appointment for installation, which requires just a short amount of time by a qualified installer.

Levittown wants to serve as an example to the rest of America that going green as a community can be done, by simply taking a series of successful steps from light bulb replacement to physical renovation. Intellidyne is looking forward to being a part of this initiative.

**About Intellidyne:** Intellidyne, LLC is the market-leading developer and manufacturer of energy savings controls for residential and commercial heating, air conditioning and refrigeration applications that immediately reduce energy consumption by at least 10%. Intellidyne, founded in 1996, is privately held and located in Glen Cove, Long Island, New York. Already installed in thousands of government, commercial and residential buildings, their patented, proprietary, microprocessor-based product line is measurably reducing energy consumption, energy costs and pollution throughout the country.
