Intellidyne Expands Sales Effort of Energy-Saving Controls to Canada

John Poirier Announced as General Manager of Intellidyne Canada Ltd.

Glen Cove, NY (January 22, 2007) – Intellidyne, LLC, the market-leading developer and manufacturer of energy savings controls for commercial and residential heating, air conditioning and refrigeration applications, is expanding north of the border to open Intellidyne Canada Ltd. The new entity will be headed by John Poirier, who will serve as general manager.

Poirier has over 20 years of strategic business experience throughout Canada. He has worked with companies to spearhead new ventures and direct initiatives in the energy markets and has most recently served as president of the Canadian Energy Conservation Group.

“With our renewed commitment to the Canadian market, we will make available energy-saving controls that can significantly save on energy consumption, lower costs and have a positive impact on the environment; all while helping Canada achieve the goal of improving energy efficiency and reducing green gas emissions,” commented Poirier.

Intellidyne’s patented IntelliCon technology reduces energy consumption by from 10% to 30% by optimizing system performance through real-time ‘load-demand’ analysis and control.

According to Mike Ruff, COO of Intellidyne LLC, “This is the only energy economizer technology for commercial and residential heating, cooling and refrigeration systems that can guarantee reductions at this level. We are excited about the opportunity to bring IntelliCon to Canadian businesses and residents so they can realize the benefits of this breakthrough technology.”

The performance of Intellidyne products has been validated by performance testing at internationally recognized research facilities including Brookhaven National Laboratories, Brooklyn Union (KeySpan) and Freeport Electric, with extensive field-testing conducted by the Canadian Energy Conservation Group. Intellidyne products are safety listed by the UL in the United States and Canada as “Energy Management Equipment.”

Intellidyne LLC

About Intellidyne Canada: Committed to providing Canadian residential, commercial and industrial building owners with high quality, affordable energy management solutions, Intellidyne Canada is currently building a network of independent authorized distributors throughout Canada to market the IntelliCon line of energy economizers.

Its mission is to reduce the energy required to run boilers, forced air furnaces and compressor-driven air conditioner and refrigeration systems by providing practical technology that can be easily installed in existing buildings or new construction.

It is committed to conserve energy and improving our environment, working in both the private and public sectors to assist in effective energy management solutions.

About Intellidyne, LLC: Intellidyne, LLC is the market-leading developer and manufacturer of energy savings controls for commercial and residential heating, air conditioning and refrigeration applications that immediately reduce energy consumption by at least 10%. Intellidyne, founded in 1996, is privately held and located in Glen Cove, Long Island, New York. Already installed in thousands of government, commercial and residential buildings, their patented, proprietary, microprocessor-based product line is measurably reducing energy consumption, energy costs and pollution throughout the country.

Intellidyne, LLC may be found on the web at www.intellidynellc.com.
